GENESIS CHAMPIONS

Whitepaper

An evolving on-chain membership pass collection on Base Mainnet

Abstract

LitDEX Genesis Champions is a collection of 1,000 on-chain membership passes deployed on Base Mainnet. Unlike static NFT art, each pass is a live on-chain record whose rarity and tier evolve with the holder's activity. The collection extends the existing LitDEX and LitVM ecosystem, an active testnet DeFi platform with over 1,600 historical participants, giving early community members a direct, discounted path onto the mainnet collection. This document describes the collection's smart contracts, supply model, minting process, progression mechanics, and the utility granted to holders at each tier.

1. Project Overview

LitDEX Genesis Champions is a dynamic, evolving membership pass collection built on Base Mainnet. Each pass begins at the lowest rarity and tier, and progresses upward as its holder engages with the LitDEX ecosystem, earning points on the LitVM testnet and spending them to level up, and eventually competing in on-chain gameplay to be promoted into rarer tiers.

The collection is built on top of an already active community. LitDEX and its LitVM testnet have accumulated over 1,600 historical participants across activities such as swaps, liquidity provision, staking, and daily check-ins. Genesis Champions is designed as the bridge that carries that existing community, and its earned points, onto Base Mainnet.

2. Smart Contracts

The collection is governed by two core smart contracts deployed on Base Mainnet, both upgradeable via the UUPS proxy pattern and independently verified on Basescan and Sourcify. Verified source code allows anyone to audit the exact logic governing minting, leveling, promotion, and revenue distribution.

Contract	Address
LitdexNFT (main collection, UUPS proxy)	0xaCA7EFFcd0c4689D131C8d18C09ea1994F2A5d4d
BasePoints (points and claim contract, UUPS proxy)	0xDa73c4c7fcA2E688A77b04137d56740085c2B8E7
Payment token (native USDC on Base)	0x833589fCD6eDb6E08f4c7C32D4f71b54bdA02913

The standard used is ERC-721. Payments across the collection, minting, and repair, are settled in native USDC on Base.

3. Supply Model

The total collection size is fixed at 1,000 passes. Every pass begins as Common and can be promoted upward through Rare, Epic, and ultimately Legend, via gameplay once the promotion mechanism launches. Each rarity has its own supply cap, forming an independent tier within the overall promotion funnel.

Rarity	Cap	Team Allocation	Community Available
Common	900	100 (Tier 9)	800 (entry point)
Rare	460	60 (Tier 5)	Via promotion

Epic	190	30 (Tier 3)	Via promotion
Legend	50	10 (MAX)	Via promotion

Of the 1,000 total passes, 900 enter the collection through the Common tier: 800 are available to the community, and 100 were minted directly to the project team at Common Tier 9. The remaining 100 team passes were minted directly into the higher rarities, 60 at Rare Tier 5, 30 at Epic Tier 3, and 10 at Legend, reserved for collaborations and promotional purposes. This full allocation is transparent and verifiable on-chain.

4. Tier Structure

Within each rarity, passes progress through a fixed number of tiers before becoming eligible for promotion to the next rarity.

Rarity	Tiers
Common	Tier 1 through Tier 9
Rare	Tier 1 through Tier 5
Epic	Tier 1 through Tier 3
Legend	Single MAX tier, no sub-tiers

5. Minting

Minting takes place in two phases, both priced in USDC.

5.1 Whitelist Mint

The whitelist phase is reserved for holders of the original LitVM testnet NFTs: LitShard, LitCore, and LitGod. Each testnet NFT held grants one discounted mint on Base Mainnet:

- LitShard (Common) holders receive 20% off
- LitCore (Rare) holders receive 30% off
- LitGod (Epic) holders receive 50% off

Discounts apply per NFT held. A wallet holding three LitShard NFTs, for example, is entitled to three separate 20%-off mints. The base public mint price is \$2 USDC.

5.2 Public Mint

The public mint is open to everyone at \$2 USDC per pass, limited to two mints per wallet. It opens 48 hours after the whitelist mint begins, and remains open until the Common supply cap is fully minted.

6. Progression System

Passes level up by spending LitDEX points. Points are earned through activity on the LitVM testnet, including swaps, liquidity provision, staking, and daily check-ins, and are claimed onto Base Mainnet through a secure signed-voucher bridge between the two chains.

Leveling cost. Each level, from level 2 up to a rarity's maximum tier, costs a flat 1,000 points, regardless of the pass's current rarity.

Promotion. Advancing from one rarity to the next, Common to Rare, Rare to Epic, and Epic to Legend, requires a pass to reach its rarity's maximum tier and then succeed in on-chain gameplay challenges. Gameplay is launching in the coming weeks. Promotion is intentionally not available through points alone, so that rarity is earned through active participation rather than purchased outright.

7. Repair Mechanic

A pass that loses a gameplay challenge becomes damaged, and must be repaired before it can be used in further challenges or leveled up. Repair carries a flat cost of 0.1 USDC plus 1,000 points, identical across every rarity and tier.

8. Holder Utility

Rare and above: priority access to partnership opportunities and community giveaways.

Epic and above: all Rare benefits, plus an allocation in the future \$LITDEX token airdrop, plus a 10% weekly share of protocol repair-fee revenue, split among all Epic holders.

Legend: all Epic benefits, plus a larger airdrop allocation, plus a 20% weekly share of protocol repair-fee revenue, split among a maximum of 50 Legend holders, making it one of the scarcest and most rewarded tiers in the collection.

9. Provenance

Every pass carries a unique on-chain identifier and a fully traceable history. Anyone can verify a pass's complete lifecycle, its original mint date, every level-up, every rarity change, and every transfer, directly on-chain, with no dependence on off-chain or centralized records.

10. Transparency

Both core contracts, LitdexNFT and BasePoints, are open source and independently verified on Basescan and Sourcify. This allows any holder, or prospective holder, to audit the exact rules governing supply, minting, leveling, promotion, and revenue distribution before committing capital.

11. Roadmap

The immediate priority following mainnet launch is the release of on-chain gameplay, which will unlock the promotion path between rarities. Beyond that, LitDEX will continue deepening the integration between the LitVM testnet and Base Mainnet, and expand long-term utility for holders as the ecosystem grows.

Genesis Champions is the first step in bringing the LitDEX community fully on-chain on Base. Further updates on gameplay, partnerships, and the \$LITDEX token will be shared through official LitDEX channels.
